

Writing: Year 2 – Summer 2 Week 4

	Day 1 Activity	Day 2 Activity	Day 3 Activity	Day 4 Activity	Day 5 Activity
Writing	Look at and practice this week's spellings. Over the last few weeks you have been learning how to spell homophones. A homophone – is when two words sound the same, but are spelt differently and mean different things. Watch these videos about homophones and then complete the worksheet below (Resource 1A).	This week you are going to write an information text about an animal of your choice. Today you are going to research an animal. Choose an animal and make notes about the following things: 1. What the animal is and what they look like 2. Where they live 3. What they eat 4. Other interesting facts See resource 2A for an example plan. To research an animal, you can use the internet, books if you have any at home or the animal fact sheets below (Resource 2B). Remember to organise your notes and facts into the correct subheading.	Today you are going to write the introduction and the first two subheadings for your information text about an animal. See resource 3A for an example information text. Audience: people who want to learn about that animal Purpose: to inform them using information and facts Remember to: Use your notes Use different sentence types Use different sentence starters and key words to hook your reader Use technical language and facts Use conjunctions to add additional details or explain why. See resource 2A for key word/sentence starter word bank.	Today you are going to write the final two subheadings for your information text about an animal. Use the same remember to list as yesterday.	Today you are going edit and revise your information text about an animal. When revising: 1. Check it makes sense 2. Improve a sentence starter 3. Add a question or exclamation sentence 4. Add in an extra fact, description or explanation aetail. When editing: 5. Check capital letters are used at the start of sentences. 6. Check your punctuation is accurate including: full stops, commas, apostrophes, question marks, and exclamation marks. 7. Correct 3 spellings mistakes. Now you can publish your information writing into a nonfiction booklet or poster with pictures and fact boxes.

Now write your own senter	ices using these homopho	ones:	
Challenge: can you think a sense below.	of any other homophones	? Write them in a sentence	e that make

Key words/sentence starters

- Some, Most, All, Sometimes, Occasionally, Often, Interestingly
- Can you imagine...? Did you know...? Can you believe...? Have you ever wondered...?

What do they look like?

- Streamlined, long bodies helps swim quickly
- Fin on their back, on their sides and a tail
- Grey, brown or blue skin colour
- Some have black stripes or spots (like the Killer Whale – a type of dolphin!)
- Blowhole to breathe
- Excellent eyesight and hearing

Where do they live?

- Live in the world's oceans, seas and some in rivers
- Some prefer coastal waters
- Some prefer shallow waters
- Dolphins live in schools or pods of up to 12

Diet: what do they eat?

- Carnivores eat meat
- Fish
- Squid
- Use excellent hearing and eyesight to locate food (known as echolocation)

Other interesting facts

- Warm-blooded mammals
- Females are called cows, males are called bulls and babies are called calves
- Most common dolphins are the bottlenose dolphins
- Can stay underwater for 15 minutes
- They communicate by clicking or whistling

Appendix 2B: fact sheets about animals (Snakes, gorillas and tigers)

Snakes

- Snakes are carnivores (meat eaters).
- Snakes don't have eyelids.
- Snakes can't bite food so have to swallow it whole.
- Snakes are found on every continent of the world except Antarctica.
- Snakes have internal ears but not external ones.
- Snakes used in snake charming performances respond to movement, not sound.
- There are around 3000 different species of snake.
- Snakes have a unique anatomy which allows them to swallow and digest large prey.
- Snakes have flexible jaws which allow them to eat prey bigger than their head!
- Snakes are covered in scales and snakeskin is smooth and dry.
- Snakes shed their skin a number of times a year in a process that usually lasts a few days.
- Some species of snake, such as cobras and black mambas, use venom to hunt and kill their prey.
- Snakes smell with their tongue.
- Pythons kill their prey by tightly wrapping around it and suffocating it in a process called constriction.
- Some sea snakes can breathe partially through their skin, allowing for longer dives underwater.
- Anacondas are large, non-venomous snakes found in South America that can reach over 5 m in length.
- Pythons can grow over 8.7 m in length and are considered the longest snakes in the world.

Gorillas

- A male gorilla can be more than 6 feet tall and is as strong as 6 strong men.
- They can live more than 50 years.
- Gorillas have 2 legs, 2 arms, 10 fingers, 10 toes, ears, eyes and 32 teeth, just like humans!
- Gorillas communicate using gestures, body postures, sounds and slapping their chests.
- They laugh when they are tickled and cry when they are sad or hurt.
- When gorillas beat their chests, it shows they are either excited or aggressive.
- Gorillas' arms are longer than their legs.
- Gorillas live in groups called bands or troops.
- Gorillas eat mostly plants: leaves, shoots, fruits, bulbs, bark, vines and nettles.
- Gorillas can understand human speech and communicate in sign language.
- Gorillas live in a range of habitats from swamps to forests.
- They also sometimes eat ants, termites, grubs and worms.
- Gorillas are endangered animals.
- A baby gorilla stays with its mother for 3 to 4 years.
- Gorillas live in Africa.
- They are very calm, shy animals.
- Gorillas rarely drink water. They only need the water contained in what they eat.
- Just like humans have unique fingerprints, gorillas each have a unique nose print.
- Each night, gorillas make a nest to sleep in out of leaves.
- Gorillas cannot swim but they can climb trees, however they do not do this much.

Tigers

- The tiger is the biggest species of the cat family.
- Tigers can reach a length of up to 3.3 metres (11 feet) and weigh as much as 300 kilograms (660 pounds).
- Subspecies of the tiger include the Sumatran Tiger, Siberian Tiger, Bengal Tiger, South China Tiger, Malayan Tiger and Indochinese Tiger.
- Many subspecies of the tiger are either endangered or already extinct. Humans are the primary cause of this through hunting and the destruction of habitats.
- Around half of tiger cubs don't live beyond two years of age.
- Tiger cubs leave their mother when they are around 2 years of age.
- A group of tigers is known as an 'ambush' or 'streak'.
- Tigers are good swimmers and can swim up to 6 kilometres.
- Tigers usually hunt alone at night time.
- Tigers have been known to reach speeds up to 65 kph (40 mph).
- Less than 10% of hunts end successfully for tigers
- Tigers can easily jump over 5 metres in length.
- Various tiger subspecies are the national animals of Bangladesh, India, North Korea, South Korea and Malaysia.
- There are more tigers held privately as pets than there are in the wild.
- Tigers that breed with lions give birth to hybrids known as tigons and ligers.

Resource 3A: example animal information text

Dolphins

Have you ever wanted to learn more about these amazing warm-blooded mammals? This information text will help you! Read on to find out more about what dolphins look like, where they live, what they eat and other exciting facts.

What do they look like?

Interestingly, you might see dolphins with grey, brown or blue skin. Some dolphins even have black stripes or spots on them, such as the killer whale which is in fact a type of dolphin. Can you believe it? All dolphins have long, streamlined bodies which helps them swim quickly in the water. Most dolphins have a fin on their back, fins on their sides and a tail that is split into two. Blowholes help dolphins breathe, so are very important. Also, they have excellent eyesight and hearing.

Where do they live?

Have you ever wondered where dolphins live? They live in world's oceans and seas but some even live in rivers. Some dolphins prefer coastal seas while others prefer to live in shallow waters. We call their home, their habitats and amazingly dolphins live in schools or pods of up to 12. How incredible is that?

Diet

Dolphins are carnivores and that means they eat meat. They often eat fish and squid but some will also eat other sea creatures. Fascinatingly, they use their incredible eyesight and hearing to help them find food and this is known as echolocation.

Other interesting facts

There are many interesting facts about these playful creatures. Did you know that female dolphins are called cows, male dolphins are called bulls and baby dolphins are called calves? Cleverly, they communicate with one another by making clicking and whistling sounds. How wonderful that is! Dolphins can stay underwater for 15 minutes before they need to return to the surface to breathe. Amazing! Finally, the most common type of dolphin is the bottlenose dolphin, although there are many others.

Spellings: Words to Learn
