Year 6 maths – Summer 2 Week beginning: 15.6.20								
Theme	Graphs and averages (Lesson 6 of 12) Reading Pie Charts	Graphs and averages (Lesson 7 of 12) Reading Pie Charts	Graphs and averages (Lesson 8 of 12) Reading Pie Charts	Graphs and averages (Lesson 9 of 12) Reading Line Graphs	Graphs and averages (Lesson 10 of 12) Reading Line Graphs Practice creating line graphs <u>Activity</u>			
Factual fluency (to aid fluency)	Practice reading tables <u>Activity</u>	Practice reading pie charts <u>Activity</u>	Practice reading pie charts <u>Activity</u>	Practice reading line graphs <u>Activity</u>				
Problem/ activity of the day Remember, just like in class, you can still show the depth of your knowledge LINK	(Lesson 1 resources below) <u>MAKING LINKS:</u> Last week, we showed information on graphs. Today we are going to read pie charts. <u>THINK: (support below)</u> Can you help me with this problem? We need to complete a table on how many people like a certain pizza topping. All we know is that $\frac{1}{4}$ of the people like tomato as a pizza topping, $\frac{1}{3}$ like ham OR pepperoni and 35 people like mushroom. Our problem is on <u>textbook</u> page 233. Look at it now. <u>SEE: (model below)</u> Look for how to solve the problem on pages 233 and 234 of your textbook. <u>DO:</u> Use what you have learnt today to solve: <u>Part 1</u> : questions 1 and 2 from textbook page 235. Check your answers before moving onto: <u>Part 2</u> : Workbook, Chapter 14, Worksheet 6, pages 163-164.	(Lesson 2 resources below) <u>MAKING LINKS:</u> Yesterday we read pie charts. Today we are going to continue that. <u>IHINK: (support below)</u> Can you help me with this problem? My friend tried to show me the amounts of fruit that went into her 250ml smoothie with bar models. If the bar for pineapple is 5cm, how long would the bars be for the other fruits? Our problem is on <u>textbook</u> page 236. Look at it now. <u>SEE: (model below)</u> Look for how to solve the problem shown on pages 236- 237 of your textbook. <u>There is no need to look at</u> part 3 on page 238-239. <u>DO:</u> Use what you have learnt today to solve: <u>Part 1</u> : questions 1 and 2 from textbook page 240-241 Check your answers before moving onto: <u>Part 2</u> : Workbook, Chapter 14, Worksheet 7, question 2, page 166.	(Lesson 3 resources below) <u>MAKING LINKS:</u> Yesterday we read pie charts. Today we are going to continue working with pie charts. <u>IHINK: (support below)</u> Can you help me with this problem? Based on the information in the pie chart on page 242, I need to work out how much money was spent by visitors to Thailand. Can I use the size of some slices to work out the size of others? Our problem is on <u>textbook</u> page 242. Look at it now. <u>SEE: (model below)</u> Look at the different ways to solve the problem shown on pages 243 and 244 of your textbook. <u>DO:</u> Use what you have learnt today to solve: <u>Part 1</u> : questions 1 from textbook page 245. Check your answers before moving onto: <u>Part 2</u> : Workbook, Chapter 14, Worksheet 8, question 2, page 168 and question 2, review 14, page 178.	(Lesson 4 resources below) <u>MAKING LINKS:</u> Yesterday we read pie charts. Today we are going to read line graphs. <u>IHINK: (support below)</u> Can you help me with this problem? My friend has a watch that tracks his fitness. He checked the readings every 10 minutes during his walk and made a table from the results. Can you draw a graph to show his results? Our problem is on <u>textbook</u> page 246. Look at it now. <u>SEE: (model below)</u> Look at the different ways to solve the problem shown on pages 246-247 of your textbook. <u>DO:</u> Use what you have learnt today to solve: <u>Part 1</u> : questions 1, 2 and 3 from textbook page 248. Check your answers before moving onto: <u>Part 2</u> : Workbook, Chapter 14, Worksheet 9, pages 169-170.	(Lesson 5 resources below) <u>MAKING LINKS:</u> Yesterday we read line graphs. Today we are going to continue with that. <u>THINK: (support below)</u> Can you help me with this problem? My friend did an experiment and wrote up her results in a table. She thinks she may have made a mistake in her experiment. Can you show her results in a graph and see if there is an error? Our problem is on <u>textbook</u> page 249. Look at it now. <u>SEE: (model below)</u> Look at a ways to solve the problem are shown on page 250 of your textbook. <u>DO:</u> Use what you have learnt today to solve: <u>Part 1</u> : questions 1-4 from textbook page 251. Check your answers before moving onto: <u>Part 2</u> : Workbook, Chapter 14, Worksheet 10, pages 171-172.			
Methods, tips, clues & checks	Day 1 resources and answers (below) for resources to support you to	Day 2 resources and answers (below)	Day 3 resources and answers (below)	Day 4 resources and answers (below)	Day 5 resources and answers (below)			

See below for resources to support you to THINK-SEE-DO

DAY 1 RESOURCES:

<u>THINK</u>: Our problem is on <u>textbook</u> page 233. We need to complete a table on how many people like a certain pizza topping. All we know is that $\frac{1}{4}$ of the people like tomato, $\frac{1}{3}$ like

ham OR pepperoni and 35 people like mushroom.

So $35 + \frac{1}{4} + \frac{1}{3}$ = the total number of people who chose a topping.

Mushroom	Tomato	Pepperoni & Ham
35 people	? people	? people

<u>DO</u>:

Part 1: questions 1 and 2 from textbook page 235.

Check your answers before moving onto: Part 2: Workbook, Chapter 14, Worksheet 6, pages 163-164.

Deepening:

An ice cream stall sells vanilla, strawberry and chocolate ice creams.

The pie chart illustrates the sales of ice cream today.

The number of vanilla and the number of chocolate ice creams sold were the same.

The stall sold 60 strawberry ice creams.

How many chocolate ice creams were sold?

Chocolate Strawberry Vanilla

<u>SEE:</u>

Look at how we can solve the problem on pages 233 and 234 of your textbook.

What do we know?

- 35 people like mushroom as a pizza topping.
- $\frac{1}{4}$ of the people like tomato. We know this because the 'rightangle' symbol on the tomato section shows us it's a quarter of the pizza.
- $\frac{1}{3}$ like ham OR pepperoni.

So $35 + \frac{1}{4} + \frac{1}{3}$ = the total number of people who chose a topping.

We know what fraction of people chose tomato, ham and pepperoni so we could use this to work out what fraction of the people chose mushroom topping.

DAY 2 RESOURCES:

THINK: Our problem is on textbook page 236. My friend tried to show me the amounts of fruit that went into her SEE: Look at how to solve the problem shown on pages 236-237 of 250ml smoothie with bar models. If the bar for pineapple is 5cm, your textbook. how long would the bars be for the other fruits? Can you help me to What % of the 250ml smoothie is lime? work out the amounts? 250ml = 100%Pineapple Orange Lime Banana 20% + 40% + 32% = 92%100% - 92% = 8% 20% of 250ml 40% of 250ml 32% of 250ml ? Lime is 8% of the 250ml smoothie. We can use what we know to help us work out the length of the bars for each fruit. We know 40% of our smoothie is shown with a 5cm bar. 40% of the smoothie is pineapple = 5cm This can help us work out the length of bars for banana, lime and DO: orange. Part 1: questions 1 and 2 from textbook page 240-241 When completing question 1, remember the geometry rule that opposite angles are equal. Check your answers before moving onto: 40% =5cm Part 2: Do not do question 1a or b. Workbook, Chapter 14, Worksheet 7, question 2, pages 166. Deepening: 15 people in this survey have no siblings. 20% = ? Use this information to work out how many people took part in the survey 8% 8% 8% 8% altogether. 32% = ? 8% = \$ Number of siblings No siblings 1 siblings Work out how many 2 siblings people each segment 3 siblings of the pie chart is worth. 17% 4 siblings Can you represent the information in a table? 28% 5 siblings

DAY 3 RESOURCES:

THINK: Our problem is on <u>textbook</u> page 242. Based on the information in the pie chart on page 242, I need to work out how much money was spent by visitors to Thailand.

If I knew some of the information in the pie chart would it help me to work out the rest? What slices of the pie chart would help me to work out others?

<u>DO</u>:

<u>Part 1</u>: **question 1** from textbook page 245. In question 1, the winner is the green slice made up of 5 slices of the pie chart = 3000 votes. Use this information to find the value of one slice.

Check your answers before moving onto: <u>Part 2</u>: Workbook, Chapter 14, Worksheet 8, **question 2**, page 168 and **question 2**, Review 14, page 178.

Deepening: Complete question 1, worksheet 8, page 167. <u>SEE:</u> Look at the different ways to solve the problem shown on pages 243 and 244 of your textbook.

If we know the value of the slice of the pie chart labelled 'q' (food), can we use this information to find the value of 't' (entertainment)? Remember opposite angles are equal.

If we know the value of the slice of the pie chart labelled 'r' (shopping), can we use this information to find the value of 'p' + 't'?

<u>Remember</u> the right-angle symbol shows a quarter of the circle (or pie) 90°.

If we know the value of the slices 'p' + 't' and the value of the slices 'q' + 'r', can we use this information to find the value of 's'?

DAY 4 RESOURCES:

<u>THINK</u>: Our problem is on <u>textbook</u> page 246.

My friend has a watch that tracks his fitness. He checked the readings every 10 minutes during his walk and made a table from the results. Draw a graph to show his results.

Does he change the speed of his walking during the time he checked his walk?

<u>DO</u>:

Part 1: questions 1, 2 and 3 from textbook page 248.

Check your answers before moving onto: <u>Part 2</u>: Workbook, Chapter 14, Worksheet 9, pages 169-170.

Deepening:

The graph shows how the weight of a letter (including the envelope) varies with the number of sheets of paper used.

<u>SEE:</u>

Look at the different ways to solve the problem shown on pages 246-247 of your textbook.

How can you tell how long he walked in an hour?

If my friend had slowed down he would not have been able to walk for the same distance. How would that change the line on the graph?

DAY 5 RESOURCES:

THINK: Our problem is on textboo								
My friend did an experiment and table. She thinks she may have n experiment. Can you show her re there is an error? How does the graph suggest the the experiment?	SEE: Ways to solve the problem are shown on page 250 of your textbook. Can you see a pattern to the changes in the ruler readings each time the weight increases by 20 grams? By how much does the length on the ruler reading change each time?							
DO: Part 1: questions 1-4 from textbook page 251. Check your answers before moving onto: Part 2: Workbook, Chapter 14, Worksheet 10, pages 171- 172. Deepening: The graph below shows some of Mr		weights added in g	0	20	40	60	80	100
		ruler reading in cm	20.1	20.6	21.1	21.8	22.1	22.6
			+ 0.5cm	n + 0.50	cm +	?.?cm +	?.?cm +	?.?cm
Biopri seteri silono sorric or rin								
Woolley's journeys.		weights added, w, in g	0	20	40	60	80	100
Woolley's journeys.		weights added, <i>w</i> , in g ruler reading in cm	0 20.1	20 20.6	40 21.1	60 21.8	80 22.1	100 22.6
			20.1					

<u>ANSWERS – part 1:</u>

<u>Day 1</u>	Day 2	Day 3	Day 4	Day 5
$\frac{Part 1}{Q.1: x = 8, y = 4, z = 2.}$	<u>Part 1</u> : Q.1: a) 13%, b) 37%, c) 30%	Part 1: Q.1: number of votes in each section of the pie chart:	Part 1: Q.1: a) 187.5km, b)62.5km Q.2: a) the train stopped	<u>Part 1</u> : Q.1: £24 Q.2: £27
Q.2: 55 people had no siblings and 30 people had 1 sibling.	Q.2: Yes, both graphs show the same information.	Red = 600 , green = 3000 , blue = 1800 , orange = 600 and yellow = 1200 Total number of votes = 7200	 twice. b) Stop 1: 30 minutes; Stop 2: 15 minutes Q.3: entire journey is 4 hours and 30 minutes 	Q.3: £42 Q.4: 3 hours and 30 minutes.

ANSWERS – part 2 and deepening:

<u>Day 1</u>	<u>Day 2</u>	Day 3	Day 4	<u>Day 5</u>
<u>Part 2</u> : Workbook, Q.1:	<u>Part 2</u> : Workbook, Q.2:	Part 2: Workbook, Q.2:	Part 2: Workbook, Q.1: a)12km, b) 36km,	Part 2: Workbook, Q.1: a)3, b)15, c)7 mins, d)12
None = 5 One = 10 Two = 20 Three = 10 More than three = 5 Q.2:	a) 0 b) 25% c) 60% = 12 schools so 10% = 2 schools and 5% is 1 school DEEPENING: No siblings 15	Boys = 1600 Girls =1200 Women =1000 Men = 400 Senior citizens = 600 Review 14, question 2:	c) 72km, d) remained unchanged Q.2: a) 8km, b) 16km, c) 12km, 30mins, d) slower. DEEPENING: Each sheet is 5 grams weight (g)	mins Q.2: a) £40, b) £180, c)£200, d) £80 <u>Deepening:</u> Possible responses: All the journeys were nearly
Cars = 162, motorcycles = 72, vans = 36, trucks = 18 and others = 8 <u>DEEPENING:</u> 90 chocolate ice creams	1 sibling272 siblings303 siblings51	a)15, b) 6, c) 3, d) 6. Deepening: Q.1: Magpie = 6 Sparrow = 14		the same length of time. The journeys were all different distances. The red and blue journeys were travelling at constant speeds but red was travelling
were sold. The angle occupied by the 'chocolate' sector (slice) is $1/2(360\circ-90\circ)=135\circ$. This is 1.5 times bigger than the 'strawberry' sector, so the number of chocolate ice creams sold is $1.5\times60=90$.	4 siblings845 siblings93Total300	Sparrow = 14 Kingfisher = 6 Pigeon = 14	weight (g) 20 1 2 3 4 sheets 20 10 5 grams 1 2 3 4 sheets 1 2 3 4 sheets	speeds but red was travelling quicker than blue. During the green journey, Mr Woolley might have been stuck in traffic or have stopped for a rest.
